DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group I, Claims 1-16 in Paper No. 7 is acknowledged. Claims 17-26 were cancelled, therefore Claims 1-16 are pending.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 4 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

4. Claim 4 recites the limitation "different oligonucleotides" in line 1. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 1-16 are rejected under 35 U.S.C. 102(b) as being anticipated by Holmes (U.S. Patent No. 5,679,773).

Holmes et al. teach compounds (oligonucleotides, peptides, etc.) synthesized on solid supports, which may contain wells, and beads distributed on the surface of the support, from which the synthesized compound may be released upon completion of the synthesis

(Abstract; col. 5, lines 64-67; col. 6, lines 26-37; col. 19, lines 58-67; col. 20, lines 1-7; col. 22, lines 11-16). The compounds may be synthesized using by photolithography (col. 7, lines 23-40; col. 18, lines 1-67). The synthesized compounds may form a chip or an array (col. 10, lines 15-37). The oligomers (e.g. oligonucleotides) are attached to the solid support by covalent linkers, which are be photochemically or chemically cleavable and the released oligomers are then used in subsequent bioassays (col. 12, lines 6-16; col. 20, lines 7-15). The linker may also contain a reactive group to which a label can be attached, resulting in a labeled oligomer. The label is chromogenic, for example, fluorescent, providing different labels (col. 20, lines 33-67; col. 21, lines 1-67). The labels may also be attached at the end of the synthesis (col. 22, lines 24-25).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Teresa E Strzelecka whose telephone number is (703) 306-5877. The examiner can normally be reached on M-F (8:30-5:30).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, W. Gary Jones can be reached at (703) 308-1152.
